Attorney Docket No.: ARC920030019US1

## 15. (cancelled)

16. (previously presented) In a client-server computing system having a cache and
storing eXtensible Markup Language (XML) data as data objects, a method for determining invalid cached objects comprising:

transforming XML data into a format suitable for a client application based on a set of transformation rules;

determining dependencies between cached objects and XML data related to the cached objects;

monitoring updates to the related XML data; and

determining the cached objects that are affected by changes to the related XML data based on the dependencies,

wherein data is represented as a tree structure having a plurality of nodes

the cached objects that are affected by the data changes are determined using the tree structure.
